

WHAT IS CLAIMED:

1. A method comprising:
 - sensing a user profile;
 - 5 determining a geographic location of a device; and
 - transmitting at least one suggestion to the device based on the geographic location of the device and the user profile wherein the suggestion indicates a photo opportunity.
- 10 2. The method according to Claim 1 wherein the user profile includes at least one content type.
3. The method according to Claim 1 wherein the device is an image sensing device.
- 15 4. The method according to Claim 3 wherein the image sensing device is a camera device.
5. The method according to Claim 1 further comprising selecting the at least
20 one suggestion from a plurality of suggestions within a photo opportunity database wherein each suggestion includes a content type and a geographic location.

6. The method according to Claim 5 further comprising adding additional suggestions to the at least one suggestion by widening an area around the geographic location of each suggestion that the device is found within.

5

7. The method according to Claim 5 further comprising adding additional suggestions to the at least one suggestion by relaxing a requirement that the content type of each suggestion match the user profile.

10 8. The method according to Claim 5 further comprising reducing a number of the at least one suggestion by narrowing an area around the geographic location of each suggestion that the device is found within.

9. The method according to Claim 5 further reducing a number of the at least
15 one suggestion by tightening a requirement that the content type of each suggestion match the user profile.

10. A system comprising:

means for sensing a user profile;

20

means for determining a geographic location of a device; and

means for transmitting at least one suggestion to the device based on the geographic location of the device and the user profile wherein the suggestion indicates a photo opportunity.

11. A method comprising:

sensing a user profile;

5 determining a geographic location of a device;

identifying a plurality of suggestions from a photo opportunity

database based on the geographic location of the device and the user
profile wherein each suggestion indicates a unique photo opportunity;

transmitting the plurality of suggestion to the device;

10 receiving a selection from the device wherein the selection is
chosen from the plurality of suggestions; and

transmitting detailed information corresponding to the selection to
the device.

15 12. The method according to Claim 100 wherein the device is a camera
device.

13. The method according to Claim 100 wherein the detailed information
includes a sample image of the selection.

20

14. The method according to Claim 100 wherein the detailed information
includes directions to the selection based on the geographic location of the
camera device.

15. The method according to Claim 100 wherein the detailed information includes a description of the selection.

5

16. The method according to Claim 100 further comprising detecting an image captured by the camera device.

17. The method according to Claim 16 further comprising comparing the
10 captured image with a sample image corresponding to the selection.

18. The method according to Claim 17 further comprising adding descriptive text to the captured image based on the comparing the captured image with the sample image.

15

19. The method according to Claim 16 further comprising updating the user profile based on the captured image.

20. The method according to Claim 16 further comprising detecting a content
20 type of the captured image.

21. A system, comprising:

an interface module configured for receiving a geographical
location of a camera device;

5 a storage module configured for storing a user profile wherein the
user profile includes at least one content type; and

a review module configured for providing at least one suggestion
based on the content type and the geographical location of the camera
device.

10 22. The system according to Claim 21 wherein the interface module is
configured for receiving a selection from the camera device wherein the selection
is from at least one suggestion.

23. The system according to Claim 22 wherein the interface module is
15 configured to transmit a detailed description to the camera device wherein the
detailed description corresponds to the selection.

24. The system according to Claim 23 wherein the detailed description
includes a sample image of the selection.

20

25. The system according to Claim 23 wherein the detailed description
includes a description of the selection.

26. The system according to Claim 23 wherein the detailed description includes directions to the selection based on the geographic location of the camera device.

5 27. The system according to Claim 22 wherein the storage module is configured to store a photo opportunity database that includes a plurality of photo opportunity listings wherein each listing is associated with a geographic area and a content type.

10 28. A computer-readable medium having computer executable instructions for performing a method comprising:

sensing a user profile;

determining a geographic location of a device;

identifying a plurality of suggestions from a photo opportunity

15 database based on the geographic location of the device and the user profile wherein each suggestion indicates a unique photo opportunity;

transmitting the plurality of suggestion to the device;

receiving a selection from the device wherein the selection is chosen from the plurality of suggestions; and

20 transmitting detailed information corresponding to the selection to the device.
